Autodesk customers include a vast majority of Fortune 500 companies, including companies in the automotive, aerospace, construction, defense, design, energy, entertainment, and consumer products industries. Autodesk boasts that AutoCAD Product Key is used by "more than 80 percent of Fortune 500 companies" and is used in products that make up the "largest companies in the world", such as Boeing, General Motors, Lockheed Martin, Siemens, John Deere, Toyota, Caterpillar, General Electric, Ford, and Boeing. For instance, in 2016, Autodesk acquired the design software design company "Wrightbus" to expand its design software business. In 2017, Autodesk acquired the cloud-based design automation software company "BIMserver" to expand its 3D modeling business. Autodesk has also made extensive acquisitions in other areas, including

Maxon, the leading provider of professional motion graphics, Kompic (a company that can design and print custom wallcoverings), and Alias Wavefront, a leading provider of 3D-printing software. These acquisitions are not only for customer support, they are also to expand Autodesk's software offerings for other industries. As of February 2020, Autodesk's annual revenues totaled approximately \$1.1 billion, of which \$1.15 billion were attributable to its CAD business. In 2016, Autodesk's CAD business experienced an approximately 37 percent increase in revenue. In 2017, Autodesk's CAD business experienced a 24 percent increase in revenue, and saw overall revenue of \$1.2 billion, compared to 2016, when overall revenue was \$1.1 billion. In 2018, Autodesk's CAD business experienced a growth rate of 36 percent. AutoCAD history [edit] AutoCAD history [edit] In the early 1980s, Autodesk started developing software for a microcomputer with an internal graphics chipset. Autodesk launched AutoCAD for the Apple Macintosh in December 1982 and AutoCAD for DOS in March 1983. AutoCAD for DOS was not originally programmed for use on computers with graphic chipsets, as it required the Microsoft DOS operating system, which only supported graphic chips from Hitachi. AutoCAD went on to become one of the most

Chrome's face authentication feature was added to the stable build of the browser last night. Now, when a user visits a website, it will attempt to recognize the user's face and the authentication will be skipped if it fails. In the user's profile, they'll be able to block all sites that ask for face authentication to access their information. The feature is similar to Face ID on Apple devices, and is meant to help users to log in to websites in a faster and more convenient way. Using face authentication is easy. First, the user needs to visit a website that supports it, then open the settings on Chrome. From there, they'll be able to enable face authentication. If they click on the box, it will take them to the settings. If they aren't able to login, they can always change their password. But if they enabled face authentication and can't log in, they'll have to manually reset Chrome to disable the feature. It's clear that Chrome is developing support for face authentication more seriously than other browsers. Microsoft's Edge browser has been incorporating the feature since November 2018. Last week, Google revealed that its Chrome browser now boasts the most active install base of any browser. The browser has become the default browser of many Chromebooks, and it appears to be successfully gaining ground in Windows and macOS as well. FTC: We use income earning auto affiliate links. More.
