I don't think I can do it with the status bar, because it would just appear behind my app. But, I want to remove the back button entirely. I'm not even sure this is possible. Thanks. A: There are many ways you can do this. Remove the back button from your navigation bar. You can do this either by removing the back button from the Navigation Bar itself or hiding the back button from the navigation bar. There are also a variety of third-party apps (like SuperPutty) that help you to do this. You can also remove the back button from the navigation bar with the Navigation Bar. View.navigationController?.navigationBar.hidden = true Implement your own back button. You can find a tutorial here. You can also use the following code to do the same. let navBarButton = UIBarButtonItem(customView:UIView(frame:CGRect(x: 0,y: 0,width: 40,height: 40))) let navBar = UINavigationController(frame:CGRect(x: 0,y: 0,width: UIScreen.main.bounds.width,height: UIScreen.main.bounds.height)) navBar.setItems([navBarButton], animated: false) navBar.isTranslucent = true navBar.tintColor = UIColor.blackColor() self.view.addSubview(navBar)

## What's New In AutoCAD?

Multilingual Coordinates: You can display Coordinate system information and coordinates in a number of languages including German, Russian, Spanish, Chinese, Japanese, French, Italian, Polish and Czech. You can enable and disable different coordinate system languages in Preferences > Settings > Languages and Fonts. Align object position: Objects are automatically aligned to each other, even with another object that is not parallel to a previously inserted object. Command keys and similar Windows keys: A keyboard with the Command key (the key marked "C" in the previous picture) is the easiest way to work in AutoCAD. You can use all standard Windows keys on the keyboard to quickly access functions, such as the arrow keys, or the standard menu to quickly access different options and functions. AutoCAD has the standard Windows keys (the Alt key, the Windows key and the Tab key) too. You can use the standard Windows keys with the "Windows is slow" hotkey setting too. Erase/Delete command: You can now easily erase just selected objects or selected areas. You can easily delete selected objects or areas with the Erase/Delete command. More intelligent grid display: You can easily see more information about the grid display. For example, when you are editing a detail object that is aligned with the Global Grid, you can see the Global Grid reference for the detail object. When you are editing an axis or a scale object, you can see the Global Grid reference for the object and the scale for the axis. Edit on a copy of a drawing: You can make multiple copies of drawings with the Edit on a copy command and you can edit them simultaneously. Batch export/import for PDF files: You can export and import multiple PDF files with the same format or use the Batch Export/Import feature to automate your PDF file conversion to and from different formats. Object snap modes: You can quickly change the snap mode of an object. Choose from Off, Two-point, Reference, Grid, Create, Offset, Isometric, One-point and Two-point. Toolbars: You can use the same, predefined toolbars in any drawing that you open. Tag cloud in various contexts: You can now quickly find drawing tags in the Tag Cloud in various contexts menu
