Gift Ideas For Your Colleagues Hobbies that use this software Features The original AutoCAD was created for use by construction and architecture professionals to model buildings and other 3D objects. The program can be used to create detailed architectural drawings and it is also widely used by manufacturing industries to create technical drawings and engineering designs for both 3D and 2D printers. AutoCAD has been designed to quickly create 2D drawings and is also very useful for those who need to create and store plans for machinery, vehicles, and 3D objects. Highlights of AutoCAD Freehand drawing As the name suggests, the function of AutoCAD is to edit a drawing in a freehand manner, without using any predefined or pre-laid out features. User controls the drawing by either moving the mouse or entering edit mode. While in the drawing tool, you can draw lines, circles, squares, etc. Objects can be created with its free hand tool by simply dragging and dropping predefined shapes on to the drawing. Points, arcs, rectangles, ovals, ellipses, and polygons are just a few of the options that are included in the free hand tool. Dot placement The dot placement tool allows you to create a stencil of a pattern on a surface and place the pattern on a drawing. The dots can be varied by color, size and shape. CAD drawing tools The following tools are available in AutoCAD: Actions: Sketch lines, copy from one part to another, delete, etc. Zoom: Magnify the portion of the drawing that you're working on Wireframe: For drawing 3D parts such as a spaceship or a car Clipping: Cut and clip a region of the drawing Clipping paths: Create a selection based on an existing shape Selection tools: Select parts of the drawing that you want to work on Door/Window: Convert a portion of the drawing into a component Set off the boundary

PostScript In AutoCAD there are two ways of creating postscript (PostScript) files: PSExport This is an alternative to the "print" function, which enables the user to obtain a PostScript file from any design layer, for printing or output to a printer. The output will be in the PS 2.5 format, and will take into account the output settings of the current printer selected in the Printer dialog box. POST is a command that will create a postscript file from the layers of the drawing window. It will take an open drawing file and create a postscript file. Hacked Ps This is a function of AutoCAD that will allow a user to create postscript files for files that are not saved in the normal postscript format, such as a dxf file or a dgn file. ObjectARX (C++) The ObjectARX library is written in C++, and is also used in the desktop add-on AutoCAD Architectural and Engineering Desktop (AED). It provides a set of classes for managing and editing drawing objects. VBA In AutoCAD 2009 there is the ability to import and export VBA files. With VBA files it is possible to automate tasks in AutoCAD. For example a user can create and import a VBA file that creates a set of temporary layers in a drawing. When a VBA file is imported into AutoCAD it will create a layer in the layer table called the "Import VBA" layer. Visual LISP Visual LISP is a programming language which is included in AutoCAD. VBA VBA files are also included in AutoCAD, as well as being used in macros and utility files. VBA files allow one to perform tasks in AutoCAD. VBA files can import and export a.dwg file. It was first formed in 1974 and was the first regional council in the ACT. It covers an area of approximately and had a population of in. History Midlands Regional Council was created in 1974 by the ACT Electoral and Administrative Review Act 1974 and initially consisted of five divisions which were originally named divisions of the territory, and included parts of the existing suburbs of Fyshwick and South Canberra. It grew to a total of five divisions by the 1980s, and had expanded further by the early 1990s with the creation of two additional divisions. In 1991, the number of divisions were reduced from five to four. One division, which was largely in the southern part of the territory, was merged with South Canberra, while the two other divisions were renamed, with division 5 being renamed the William Slim zone, and division 6 being renamed the ACT Division, Midlands Regional Council was the first regional council to be created in the ACT, and its first Chairperson was Terry O'Toole. It was named after the Midlands of New South Wales, and during its first term (1974–1980), the Council Chamber was located in the Royal Australian Institute of Architects National Conference Rooms in Fyshwick. During the 1980s and 1990s, a number of new suburbs and villages were established and added to the council area, including: Fyshwick East, Weetangera, Bonython, Kellyville, Chisholm, Strathfield, Eucalyptus, Nicholls. In 1990, the ACT Electoral and Administrative Review Act was passed, which established a system of single member electoral divisions for local government elections, which was a change from the previous form of multiple member districts. At the 1995 elections, the new divisions, named after suburbs of Canberra, were created and the former Division 5 was renamed to cover the suburbs that were formerly in Division 4, including parts of Canberra Airport.
